BARD® COMPREHENSIVE CARE
FOLEY TRAYS

All in one place. All in one system. All in one price.
Urinary catheterisation is a significant cause of healthcare associated infections. It is essential to follow best practice guidelines to minimise the risks to both you and the patient by providing a sterile environment and personal protective equipment.

**Epic Guidelines**

Guidelines for best practice outline the following process for catheter insertion:

- Clean the urethral meatus
- Use a sterile, closed drainage system
- Use careful hand hygiene
- Use an aseptic technique
- Use personal protective equipment
- Urethral lubrication should be used on all patients

Could **urinary catheterisation** be done a **better way?**

The **BARD® Comprehensive Care Foley Tray** contains everything required to either catheterise or re-catheterise, allowing optimisation of clinical practice and reduction of risk to the patient in one handy pack.

- Available in hospital and on the Drug Tariff

**Improving patient outcomes and quality of care**

Are you doing the **best** for your patients

Urinary catheterisation is a significant cause of healthcare associated infections. It is essential to follow best practice guidelines to minimise the risks to both you and the patient by providing a sterile environment and personal protective equipment.

**Epic Guidelines**

Guidelines for best practice outline the following process for catheter insertion:

- Clean the urethral meatus
- Use a sterile, closed drainage system
- Use careful hand hygiene
- Use an aseptic technique
- Use personal protective equipment
- Urethral lubrication should be used on all patients

**The BARD® Comprehensive Care Foley Tray Facilitates Best Practice**
Could urinary catheterisation be done a better way?

**WHAT’S IN THE BOX**

- One empty 10ml syringe to deflate the balloon during re-catheterisation
- One prefilled 10ml syringe of sterile water to inflate the newly inserted catheter balloon
- Foley catheter preconnected to your choice of collection system
- Protective waterproof sheet and fenestrated drape
- Two pairs of latex free gloves
- Cleansing solution and gauze
- An apron for the healthcare professional
- A refuse bag to dispose of items†
- STATLOCK® Foley Stabilisation Device
- Syringe of lubricating gel

*In community version only*
You’re preparing to catheterise and can’t find all the essential items

Why take the risk when there is a better way
PreConnect Closed Drainage System

Removable Tamper Evident Seal prevents accidental bag disconnection and discourages misguided breakage of the sterile closed system.

PreConnect catheters within the BARD® Comprehensive Care Foley Tray range include:

LONG TERM (standard and female lengths)
- BIOCATH® hydrogel coated Foley catheter
- LUBRI-SIL® hydrogel coated all silicone Foley catheter

SHORT TERM (standard and female lengths)
- BARDEX® I.C. anti-infective Foley catheter with Bacti-guard® silver alloy coating and BARD® hydrogel
- PTFE coated latex catheter

Urinary tract infections (UTIs) are a major source of healthcare associated infections (HCAIs)

Making a Difference

“The introduction of the Foley catheter trays are aimed at providing patients with enhanced services and best practice throughout the trust. It is important to focus on these aspects of care in light of the very recent QIPP safe care work stream quality improvement programme – ‘Safety Express’. The ambition of this initiative is to eliminate harm from UTIs in patients with catheters in 95% of patients by 2012.”

Sara Thompson
Sandwell Hospital

“Utilising the Foley catheter tray as opposed to the individual equipment required for a catheterisation is predicted to save the clinicians approximately 8 minutes per catheterisation. This saved time is becoming increasingly important in the light of such schemes as the Productive Ward Programme.”

Laura Ludman/Sarah Mimmack
The Royal Orthopaedic Hospital

Make financial savings and make processes more efficient releasing time to care for patients
